Design of the mechanical, electrical and hydraulic services were provided for this new Junior School two storey classroom block.

The building comprises 10 classrooms with a two storey atrium entry foyer. The classrooms were fully air conditioned with individual room control.

The lighting design provided high efficiency light fittings. Voice and data cabling infrastructure was provided with a fibre optic cable connection to the main server.

In addition a broad band cabling system is provided in each classroom to enable students fast access to the internet.

A master antenna television system is provided for free to air television signals and a satellite dish for pay television and transmission of data between campuses.
